

pdvWireless Launches TeamConnect

Offering Communication and Mobile Management Solutions to Boost Team Productivity On and Off-Site

WOODLAND PARK, N.J., (March 27, 2018) – For organizations seeking the ability to enhance productivity, reliability, and customer service, they need not look further than TeamConnect. pdvWireless, Inc. (NASDAQ: PDVW) a wireless communications carrier focused on utilizing its spectrum assets to develop and offer next-generation network and mobile communication solutions, introduces TeamConnect, the evolution of the company's DispatchPlus® service, a wireless communication, and mobile management solution.

TeamConnect solves all work team communication needs including instant one-to-one and group voice communications, GPS-based team member tracking, and instant status updates – including event and field documentation. It helps team leaders improve individual team member performance and overall team productivity, reducing an organization's expenses and improving their bottom line.

"TeamConnect re-invents the way work teams communicate. We've taken the best aspects of our previous offering, DispatchPlus, and with modernized features and functionality, now offer the most comprehensive group of solutions to connect mobile work teams," said Joe Kobylak, vice president and general manager for pdvWireless. "With TeamConnect, work teams are more efficient and effective, collaborating instantaneously to conduct their business and solve problems."

TeamConnect answers the real-time communications needs of organizations managing mobile work teams, free from device restrictions. It creates a 'hotline' between team members with a smart device or two-way radio to connect quickly and clearly, improving driver safety and minimizing driver distraction with instant communication.

Along with the rebranding to TeamConnect, pdvWireless is introducing two new products– TeamConnect Mobile and TeamConnect Hub. To best meet customers' needs for real-time communication, the platforms can be used together or independently, and are interoperable with existing products.

TeamConnect Mobile

Available via smartphones and tablets, TeamConnect Mobile is an application that allows team members to instantly communicate either one-on-one or in groups, regardless of their cellular telephone service provider. TeamConnect Mobile, in addition to being a push-to-talk voice communications solution, also identifies team member locations, provides geofence alerts, instant status messaging, and photo documentation. With real-time photos, businesses can more efficiently respond to inquiries, resolve disputes, and bill for repeat

service visits. Users of TeamConnect Mobile can even communicate with two-way radio users.

TeamConnect Hub

TeamConnect Hub provides control center functionality that operates on a Chrome® or Firefox® browser. Team leaders and coordinators can see where their teams are deployed and instantly communicate with them on a one-on-one basis or in groups. As a browser-based control center, TeamConnect Hub is unique in that it can be used anywhere there’s an Internet connection, whether on a desktop, laptop or tablet. No longer is a person limited to a dedicated PC or specific location to tie them down. TeamConnect Hub also provides the ability to play back all voice traffic for up to 24 hours at no additional cost – providing a record of critical communications. It makes managing work teams more effective and efficient.

With TeamConnect, customers can:

- TALK- With Instant Voice Communication reach individuals, work groups or entire teams with one button push-to-talk capability.
- LOCATE- GPS-based team member tracking provides the ability to see where team members have been, where they are now, and the closest person available for the next work assignment.
- MANAGE- With on-the-go one-button Instant Status Updates, reduce office calls and time-consuming paperwork. Real-time event/field documentation and reporting capabilities (inclusive of photography with TeamConnect Mobile) provides the data needed to run a business with accuracy.

PLAN	PRODUCT NAME & DESCRIPTION	TALK	LOCATE	MANAGE
